## **I. Overview :**

### **I. (a.) Introduction :**

The distance learning course in Political Science has been designed to train the students in the subject and enable them to use the skills and disciplinary insights to critically examine, assess, and explain the political phenomenon. Woven into a coherent structure, with wide range of disciplinary, inter disciplinary and trans-disciplinary modules and themes, the course provides a solid foundation to the students who can take forward their learned skills and knowledge for higher research in the discipline and its associated domains.

Higher education is fast changing globally in terms of its form, nature, course contents, pedagogy, and techniques of evaluation. Universities and educational institutions are experimenting in almost all the domains articulated in the preceding line. This change is both due to the factors at work within the system and forces acting outside. Globalization has pushed them in the ring of competitiveness to work hard to excel or wait for exile. There is a global ranking of universities and other institutions which are known to all on the screen of their computer in a fraction of seconds with a click of the mouse. And students are flying to the institutions which promise them better skills and training in the subjects. Education is all about the addition of value in the individual insights and skills without which he remains deprived of realizing his fullest potentials. Traditional modes of rote-learning are fast getting challenged for a new philosophy of creative and out of box thinking. Innovations, research, interactive discussions, and new modes of project-based and problem-solving methods have occupied the attention in the universities in place of blackboard and lecture mode. Pedagogy is being reworked, and education is being redefined. Disciplinary boundaries are melting for Interdisciplinary and trans- disciplinary knowledge system.

### **I. (b). Learning Outcomes Based Approach to Curriculum Planning**

In such a scenario, it was imperative to make some fundamental changes in the course curriculum at the under graduate level. The University Grants Commission attempts to introduce the learning outcomes-based Course Curriculum is, therefore, a welcome step in the right direction. It is just like the performance budgeting in which every unit of expenditure corresponding has output. The learning outcomes-based course defines it clearly what a student is going to learn from the course, and it's every unit, and how are they going to apply the learned skills. The benefit of this course design is that students are not just taught in theory but also how to apply the theory in explaining, assessing and critically examining the political questions and political phenomenon one encounters on day to day basis in real life situations. This aim at introducing a paradigm shift in the pedagogy at the under graduate level. Some of the subjects at school level have experimented this, and the results are very encouraging. The focus of the teaching-learning is not to test the memory power of the students but to assess his or her imaginative and innovative mind in the analysis of given situations.

Needless to say, project-oriented problem-solving research components, building case studies; team and leadership orientations are integral to the learning process.

### **I. (c). Programme content designing and developing**

A graduate in Political Science should have a core competency in the discipline. He should be able to engage with and reflect on the political questions and issues adequately. What is required for this is the effective communication skill, in-depth knowledge of the discipline and critical faculty which could go applied in analyzing, assessing, and articulating the mind. He should have information and the ability access the quality literature in the discipline. The graduates should be curious and inquisitive about reading the political dimension of the issues and apply the theoretical frame work to understand them. They should be able to further learn and analyzed them in a broader context of inter disciplinarily rather than narrowing to political perspective only. They should have digital literacy, research temperament and research skills. They should be aware of the ethical values and norms in academic writing and capability to integrate the discipline in to larger bodies of knowledge. They should have an attitude of self-learning as well as working with group membership team spirit.
